

4_Measures of Shape - Skewness

```
In [1]: import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
```

```
In [3]: dataset = pd.read_csv('titanic.csv')
```

```
In [4]: dataset.head(3)
```

```
Out[4]:
```

	Survived	Pclass	Name	Sex	Age	Siblings/Spouses Aboard	Parents/Children Aboard	Fare
0	0	3	Mr. Owen Harris Braund	male	22.0	1	0	7.2500
1	1	1	Mrs. John Bradley (Florence Briggs Thayer) Cum...	female	38.0	1	0	71.2833
2	1	3	Miss. Laina Heikkinen	female	26.0	0	0	7.9250

To see if Age has skewness or no skewness

```
In [6]: sns.histplot(x='Age', data=dataset)
plt.show()
```

This is right skewed chart (Positive skewness)

```
In [8]: # If skew is greater than zero - Positive skewness and vice versa  
dataset['Age'].skew()
```

```
Out[8]: 0.44718857190799916
```
